## Risk Management

The risk assessment process our team conducted involved: risk identification, analysis, planning, and monitoring. The way we formatted identified risks was:

- Risk ID, to allow for easy identification of a specific risk
- Risk type, so we know how and where the risk can cause issues to the project
- Description, a brief description of the risk to explain what it would be
- Likelihood, the likelihood of said risk from 1-5 (1 being unlikely, 5 being very likely)
- Severity, the seriousness said risk from 1-5 (1 being hardly noticeable, 5 being major)
- Mitigation, the action that would be taken to mitigate the risk
- Effectiveness, how effective that mitigation would be rated from 1-5, (1 being hardly effective, 5 nullifying the risk almost entirely)

ID	Risk Type	Description	Likelihood	Severity	Mitigation	Effectiveness
1	Product	Members being	4	4	Pair people in 2s to	3
		unfamiliar With			ensure work isn't	
		Java			reliant on 1 person	
2	Product	Members being	4	4	Have consultations	4
		unfamiliar With			with members more	
		Java			familiar with Java	
2.1	Product	Members being	4	4	Team pairing, team	4
		unfamiliar with			consultations and	
		specific java			research into	
		development			required technologies	
		frameworks			prior to coding	
3	Project	Members being	3	4	Have regular	5
		unavailable			meetings to reassign	
		during product			work and pair people	
		creation			to ensure work isn't	
					reliant on one	
4	Product	Loss of code due	1	5	Keep local copies of	5
		to host website			code whenever major	
		crashing/unavail			changes are made.	
	<b>.</b>	ability				
5	Project	Communications	2	4	Have several means	4
		tools becoming			to communicate to	
		unavailable/cras			each other in case	
		hing			one goes down. Worst case work	
6	Project	Team member	3	5	face-to-face	4
0	Project	loses access to	3	٥	Have reassignment of work and have pairs	4
		an internet			assigned to projects,	
		connection			Access internet at	
		Connection			alternative location if	
					system allows.	
7	Project	Team member	3	4	Have set timelines for	4
'		illness causing		•	work and reassess	,
		inability to work			allocation if deadlines	
					are not being met	
<u> </u>	l	1	l .	L	a. a not semigrinet	l

8	Project	Members not attending the team meetings	4	3	Be flexible with work allocation to cover people who are not pulling weight. Chase up members and make sure everything is ok with them	4
9	Project	Members not doing the code they were assigned to do	3	4	Be flexible with work allocation to cover people who are not pulling weight	4
10	Project	Changes being made to the project that do not fit requirements	2	2	Version control and rollback options. Reminding members of required scope of project	7
11	Project	Part of project not up to required standard	2	4	Work in pairs, aiding if needed and requesting assistance if struggling. Review work to make sure it's appropriate	5
12	Project	Sprites are unfinished, potentially delaying development of core systems	3	2	Have placeholders available for all assets so development can continue	5
13	Project	In person meetings/tasks being prevented due to weather or local lockdowns	4	2	Every member of the team has access to video/voice call software for live meetings	5
